## Taco Teams Up with Autodesk to Offer State-Of-The-Art Revit 3D Pump Files

Taco's Commercial Products Division is pleased to announce that all of our FI, KV and KS pump models are fully Revit compatible (.rfa) and are now available on the [Taco-HVAC website](#).

In addition, the Taco FI, KV, and KS Revit (.rfa) files will be available on the Autodesk Seek website. Autodesk Seek is a web service that allows designers — architects, engineers, students — to search and find manufacturer-specific or generic building products and associated design content.

Using Autodesk Revit software, engineers can sketch freely, create custom 3D forms quickly, and manipulate those forms interactively in simulated real world performance.

Taco is the first pump manufacturer to offer Revit files. Contact your Behrmann Company sales engineer for more information.

**Taco, Inc.** continues to expand its commercial pump offerings with the introduction of the **VT Series** vertical turbine pumps and **TC Series** — single stage, double suction, vertical split case pumps for use in heating, air conditioning, pressure boosting, cooling water transfer and water supply applications.

The TC Series' top suction and discharge makes this product line the ideal choice for minimizing installation footprint in tight mechanical rooms.

TC SERIES

TC Series pumps are available in 1160 and 1760 RPM in bronze fitted and all iron versions. Standard operating temperature is 250° F and 175 PSIG in accordance with ANSI Standard B16.1 (Class 125). Optional operating pressure is 300 PSIG at 250° F temperature.

TC Series pumps casings are constructed of cast iron. Their bronze impellers are high efficiency, double suction (with stainless steel impellers an option). Their carbon steel or stainless steel shafts come with replaceable bronze or stainless steel sleeves.

The pumps' mechanical seal handles a wide range of applications with superior longevity, and come with a tungsten carbide rotating element and stationary seat. TC Series pumps have excellent reliability and are easy to install.

**VT Series Vertical Turbine Pumps** with stainless steel impellers, shafting, couplings and bolts provide the ultimate in reliability and ease of installation and maintenance. In addition the intermediate stage bowls are epoxy lined for maximum efficiency. Applications include condenser water, chilled water, water transfer, pressure boosting and water supply. Quiet, dependable, with proven performance: that's the Taco VT Series of pumps

Contact your Behrmann Company Sales Engineer for application, specification and selection assistance with either of these pump offerings.

**Stop by our booth at the SMACNA St. Louis Products & Trade Show on Wednesday, September 23.**
